

## Section 2.4

# CULTURAL RESOURCES

## **2.4 Cultural Resources**

Cultural resource impacts are addressed in Section 4.4 of the EOMSP Final EIR. The EOMSP EIR concluded that the potential exists for development within the EOMSP to have significant impact on important cultural resources. The analysis identified 51 archaeological sites within the EOMSP. The EOMSP Final EIR identified several types of mitigation measures. Testing was required for all untested sites to determine their importance. Sites found to have importance were required to be preserved, protected with a soil cap, and/or subjected to a data recovery program to retrieve important artifacts before impacts occurred.

The results of the inventory completed by Affinis are presented below and included as Appendix F to this SEIR. Confidential records and maps are on file at the County of San Diego, Department of Planning and Land Use and at the South Coastal Information Center.

The study area for the cultural resources report consisted of the project site and adjacent land to the north and west to accommodate the proposed pad as well as improvements to Otay Mesa and Harvest roads.

### **2.4.1 Existing Conditions**

#### ***Methodology***

The assessment of the proposed project's potential impact on cultural resources is based, in part, on information and conclusions reached in the previously certified EOMSP Final EIR and the associated Addendums, Management Plan for Otay Mesa Prehistoric Resources Technical Report (Gallegos & Associates 1998) and the 2002 Supplement to the East Otay Mesa Cultural Resources Technical Report (Russell et al. 2002), as well as the project-level analysis contained in the Archaeological Resources Inventory for California Crossings prepared by Affinis in March 2008 (Appendix F).

The analysis began with a review of institutional records and reports concerning the project area (including off-site improvements) and immediate vicinity, and a field survey. Updated site record forms were prepared for site CA-SDI-12337, which were submitted to the South Coastal Information Center.

The evaluation of cultural resources for the proposed project is in conformance with the County of San Diego Resource Protection Ordinance (RPO), Section 21083.2 of the Public Resources Code, the California Environmental Quality Act (CEQA) and the County of San Diego Guidelines for Determining Significance for Cultural Resources. Statutory requirements of CEQA (Section 15064.5) were followed in evaluating the significance of the cultural resources.

### ***Records Search Result***

According to the records on file at the South Coastal Information Center (SCIC), there have been several cultural resource studies conducted within a one-mile radius of the project site, and over thirty-five archaeological sites and isolates have been documented. One (CA-SDI-12337) of the previously recorded cultural resources was identified within the 29.6-acre project site.

### ***Previous Archaeological Surveys***

Several archaeological surveys, testing programs and historic research have been completed in the vicinity of the proposed project. The majority of sites in the vicinity of the project site are lithic scatters. In addition, some of the sites are quarry and lithic reduction stations, and temporary camps (see Table 1 of Appendix F). Historic archaeological sites within a mile of the project include the Alta School site, the Piper Ranch site and several scatters of historic debris. Homestead locations also have been recorded within the vicinity based on historic maps and aerial photographs.

### ***Archaeological Survey Results***

The purpose of the cultural resources technical study was to relocate previously recorded resources and identify any new sites. One previously recorded cultural resource (CA-SDI-12337) was encountered during the survey of the proposed project. The study concluded that the entire project site lies within the boundaries of CA-SDI-12337. CA-SDI-12337 is classified as a prehistoric lithic scatter. No new sites or isolates were identified.

Four archaeological sites (CA-SDI-5352, CA-SDI-9974, CA-SDI-10,072, and CA-SDI-10,735) were recorded within the vicinity of the proposed project. However, it has been determined that these sites are actually part of one, 700-acre site (CA-SDI-12337). Therefore, these sites were re-recorded as site CA-SDI-12337.

Site CA-SDI-12337 is a large lithic scatter with associated artifacts that include debitage, cores and flaked stone tools. Several testing programs have been completed on portions of site CA-SDI-12,337 and it has been determined that the site is not a significant resource. Two artifacts (a core and a flake) were located on-site during the current survey. The presence of these artifacts does not change the previous conclusions regarding CA-SDI-12337. In addition, no structures or buildings exist on-site that would be considered significant. Furthermore, human remains have not been found at CA-SDI-12337 nor were they associated with any of the other recorded sites within a one-mile radius of the project area.

In summary, important research questions can be answered from data associated with significant sites on Otay Mesa; however, the majority of sites in the area (including the site within the project boundary), consist of sparse lithic scatters which are not considered significant sites and have little archaeological research potential.

## 2.4.2 Analysis of Project Effects and Determination as to Significance

### *Guidelines for the Determination of Significance*

A significant cultural resource impact would occur if the proposed project would:

1. Cause a substantial adverse change in the significance of a historical resource, as defined in §15064.5 of the State CEQA Guidelines. This shall include the destruction, disturbance or any alteration of characteristics or elements of a resource that cause it to be significant in a manner not consistent with the Secretary of Interior Standards.
2. Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5 of the State CEQA Guidelines. This shall include the destruction or disturbance of an important archaeological site or any portion of an important archaeological site that contains or has the potential to contain information important to history or prehistory.
3. Disturb any human remains, including those interred outside of formal cemeteries.
4. Propose activities or uses damaging to significant cultural resources as defined by the Resource Protection Ordinance and fails to preserve those resources.

Guidelines 1 and 2 are derived directly from CEQA. Sections 21083.2 of the Public Resources Code and 15064.5 of the CEQA Guidelines recommend evaluating historical and archaeological resources to determine whether or not a proposed action would have a significant effect on unique historical or archaeological resources. Guideline 3 is included because human remains must be treated with dignity and respect and CEQA requires consultation with the “Most Likely Descendant” as identified by the Native American Heritage Commission (NAHC) for any project in which human remains have been identified. Guideline 4 was selected because cultural resources are protected under the RPO. Any project that would have an adverse impact (direct, indirect, cumulative) on significant cultural resources as defined by these guidelines would be considered a significant impact.

The County RPO does not allow non-exempt activities or uses damaging to significant prehistoric or historic lands on properties under County jurisdiction. The only exempt activity is scientific investigation. The project is required to be in conformance with applicable County standards related to cultural resources, including the noted RPO criteria on prehistoric and historic sites. Non-compliance would result in a project that is inconsistent with County standards.

### *Analysis*

According to CEQA Guidelines (Section 15126.4(b)(3)), “public agencies should, whenever feasible, seek to avoid damaging effects on any historical resource of an archaeological nature and requires the consideration of preservation in place as the preferred manner of mitigation and data recovery, only if preservation is not feasible.”

An analysis of each site is provided below along with a determination as to the significance of the site, pursuant to Section 15064.5 of the CEQA Guidelines and the County RPO.

### Historic Resources (Guideline 1)

No evidence of historic resources (sites or structures) within the project footprint (including offsite improvements) was discovered during the records search, literature review or field survey. **Therefore, the implementation of the proposed project would cause a less than significant impact to historic resources.**

### Archaeological Resources (Guideline 2)

As a result of the cultural resources survey, one previously recorded archaeological resource (CA-SDI-12337) was relocated (large lithic scatter). Based on previous testing and evaluation, it was determined that the site contains limited research potential and, as such, is not a significant resource pursuant to CEQA (County of San Diego Supplement to the EOMSP, 2002). However, in accordance with the County's Guidelines for Determining Significance, the resource was considered important because of its potential to yield information. Recordation of site CA-SDI-12337 has exhausted the research potential and as such, no further work is required. **Therefore, because site CA-SDI-12337 has been recorded and evaluated as not significant, impacts incurred through project implementation would be less than significant.**

Although no significant archaeological resources have been observed on the project site, the potential exists for buried archaeological resources due to the location of the property within a known archaeology site (CA-SDI-12,337). Should buried significant cultural resources be present within the project footprint (including off-site improvements), implementation of the project could have a direct impact on cultural resources. **Therefore, the project could have a significant impact on buried archaeological resources (Impact CR-1).**

### Human Remains (Guideline 3)

No evidence of human remains, including those interred outside of formal cemeteries, was discovered during the records search, literature review, field survey or previous site testing and evaluation. There is no indication that the project site was used by Native Americans for religious, ritual, or other special activities and therefore, impacts to Native American burial sites are not expected.

If human remains are discovered, work shall halt in that area and the procedures set forth in the California Public Resources Code (Sec. 5097.98) and State Health and Safety Code (Sec. 7050.5) shall be undertaken. **Therefore, a less than significant impact related to human remains is expected to occur.**

### RPO Significant Cultural Resources (Guideline 4)

One cultural site (CA-SDI-12337) was identified during the records search, literature review and field survey. Based on previous testing and evaluation, it has been determined that this site is not RPO significant. **Therefore, the implementation of the proposed project would cause a less than significant impact to a significant cultural resource pursuant to RPO.**

In conclusion, cultural resources onsite do not meet the definition of “historic resource” per Section 15064.5 of CEQA and is not considered a “significant prehistoric or historic site” per the San Diego County RPO.

### 2.4.3 Cumulative Impact Analysis

According to CEQA, the importance of cultural resources comes from the research value and the information that they contain. Therefore, the issue that must be explored in a cumulative analysis is the cumulative loss of that information. For sites considered less than significant, the information is preserved through recordation and test excavations. Placing significant sites in open space easements avoids impacts to cultural resources and also preserves the data. The information from significant sites that are not placed within open space easements would be preserved through recordation, test excavations and data recovery programs that would be presented in reports and filed with the County of San Diego and the South Coastal Information Center. The artifact collections from any potentially significant site would also be curated at the San Diego Archaeological Center and would also be available to other archaeologists for further study.

The cumulative study area was defined as all of Otay Mesa and the western portion of Otay Valley (that portion adjacent to Otay Mesa), as this area was all part of the same settlement area, both historically and prehistorically. Prehistoric and historic settlement patterns can be very broad. Therefore it is prudent to consider a large study area when evaluating cumulative impacts.

The cumulative projects in the vicinity of the proposed California Crossings project are listed in Table 1-1, *Cumulative Projects*, and are shown on Figure 1-9. Within the cumulative study area, 31 sites are CEQA significant, and two are both CEQA and RPO significant cultural resources because of their potential to provide important information about scientific research questions (refer to Table 2.4-1 for specific information).

Two projects within the County portion of the cumulative study area contain significant cultural resources. Cumulative project sites within the City of San Diego contain 24 significant sites, a National Register eligible historic district (buildings), and 78 sites and loci for which significance has not been determined or information was not available as to site significance (testing would need to be completed to determine whether the sites are significant). As indicated in Table 2.4-1, the significance of cultural resources in the City of San Diego portion of the cumulative study area is not known. However, this information is not required to complete the cumulative analysis below. Significance determinations are included for informational purposes only. The remaining cultural resources in the vicinity of the project area (over 230 sites and isolates) were determined not to be significant cultural resources. The following is a discussion of the significant and potentially significant cultural sites within the cumulative project boundaries.

The vast majority of archaeological sites on Otay Mesa are lithic scatters. The significant sites that have been identified on Otay Mesa are habitation sites with intact subsurface deposits. These sites are generally located at or near the heads of canyons, such as Dennery Canyon, Wruck Canyon, and Spring Canyon, or sometimes on benches in the canyons. Although some Late Prehistoric material has been identified at sites on Otay Mesa, in general, radiocarbon dates and diagnostic material (both of which are limited) point to extensive use of the mesa during the

Early Archaic period. Impacts to significant sites within the cumulative impact study area have generally been mitigated through data recovery programs, although a few of the sites have been mitigated through preservation in open space areas. Capping was recommended to avoid impacts to significant deposits at CA-SDI-8654 in conjunction with the National Enterprises Storage and Recycling Facility. Data recovery programs have been undertaken at that site and for other projects in the past.

The proposed project's impacts to cultural resources would be reduced to a less than significant level through mitigation measures that include grading monitoring, and if appropriate, proper data recovery.

Future development within the cumulative study area would be subject to analysis and mitigation requirements similar to the proposed project, pursuant to CEQA. Lead Agencies (City of San Diego, County, Caltrans, etc.) all require that impacts to known cultural resources be mitigated through placement of cultural resources within open space easements, data recovery, curation, and/or reporting. Jurisdictions also require that impacts to any undiscovered or buried potentially significant cultural resources be reduced less than significant by measures similar to the proposed project Mitigation Measure M-CR-1 below. Thus, all archaeological impacts associated with the related cumulative projects are expected to be less than significant and/or fully mitigated.

**Based on the compliance of the proposed project and related projects within the cultural resources cumulative study area with CEQA and implementation of the project monitoring measures presented in Section 2.4.5, the proposed project would have a less than significant contribution to cumulative cultural resource impacts.**

#### **2.4.4 Significance of Impacts Prior to Mitigation**

Based on the analysis provided above, the proposed project would have the following significant impact without mitigation.

**CR-1:** Should a buried archaeological resource that meets any of the significance criteria described above be present within the project footprint (including off-site improvements), implementation of the project would have a significant, direct impact on this resource.

#### **2.4.5 Mitigation**

Implementation of the following mitigation measure would reduce potential impacts to unknown subsurface cultural resources within the project foot print (including off-site improvements) to less than significant.

**M-CR-1:** Direct impacts to buried, previously unrecorded cultural resources would be mitigated through the implementation of a grading monitoring program. The monitoring program shall be in accordance with the County of San Diego Significance Guidelines and shall include:

1. Providing evidence that a County-approved archaeologist has been contracted to implement the monitoring program.

2. A Native American monitor.
3. Attending pre-grading meetings to explain and coordinate the requirements of the monitoring program.
4. Monitoring all areas identified for development including off-site improvements;
5. Documentation of isolates and non-significant deposits.
6. Diverting or temporarily halting disturbance operations in the area of any discovery of potentially significant cultural resources to allow evaluation and significance determination.
7. Consultation with the County staff archaeologist at time of discovery to determine the significance of the cultural resources.
8. Preparation of a Research Design and Data Recovery Program for significant cultural resources.
9. Contacting the County Coroner in the event that human bones are discovered.
10. Contacting the Native American Heritage Commission, in the event that human remains are determined to be of Native American origin. Most Likely Descendant contacting to determine proper treatment and disposition of the remains.
11. Curation of associated records and all artifacts collected as part of the grading monitoring program.
12. Preparation of a final report documenting the field and any analysis results.

#### **2.4.6 Conclusion**

The proposed project may have significant impacts if unknown artifact deposits are uncovered or unearthed during project implementation (Impact CR-1). In order to ensure that impacts to significant, previously unrecorded buried archaeological sites would be less than significant, the above described monitoring program (M-CR-1) would be implemented in accordance with standard archaeological practices. Therefore, this impact to cultural resources would be reduced to less than significant.
